Student Design Evaluation Panel

Dear **Panelists,**

We respectfully request approval to revise the testing procedure for Section 2.1.3: Accuracy Testing for Completion Status in our Design Project. The original test plan proposed comparing the NPK values measured by our system with laboratory test results.

We propose to modify this procedure so that the evaluation will instead determine whether the measured NPK values meet the minimum nutrient content requirement of greater than 1%, as defined under the standard Regulation (EU) 2019/1009 of the European Parliament and of the Council for Organic Solid Fertilizers (See Annex I).

This request is submitted on behalf of the project group, and the undersigned has been permitted by the members to serve as the signatory.

Thank you.

Sincerely yours,

ED ANGELO EISE P. PACHECO
Team 16 Member

PFC 1(A)(I): SOLID ORGANIC FERTILISER

1. A solid organic fertiliser shall be in solid form.

2. A solid organic fertiliser shall contain at least one of the following declared primary nutrients: nitrogen (N), phosphorus pentoxide (P_2O_5) or potassium oxide (K_2O).

Where a solid organic fertiliser contains only one declared primary nutrient, that nutrient content shall be at least the following:

(a) 2,5 % by mass of total nitrogen (N),

(b) 2 % by mass of total phosphorus pentoxide (P_2O_5), or

(c) 2 % by mass of total potassium oxide (K_2O).

Where a solid organic fertiliser contains more than one declared primary nutrient, those nutrient contents shall be at least the following:

(a) 1 % by mass of total nitrogen (N),

(b) 1 % by mass of total phosphorus pentoxide (P_2O_5), or

(c) 1 % by mass of total potassium oxide (K_2O).

ANNEX II: Proposed Changes to the TERM Plan

Objective: Develop an application that can monitor the status of the composting process, such as BPA dispensing, regulation, and completion.	
Test Case	2.1.3 Accuracy testing for completion status
Required Equipment	Personal computer, final compost
Procedure	1. Run the program 2. Record the final readings of the batch (with NPK values reaching at least 1%) when the status becomes “completed.” 3. Confirm that the NPK values are greater than or equal to 1%
Schedule	January 12, 2026 - April 13, 2026
Standard(s)	IEEE 29119-4-2021 (Software Testing), Regulation(EU)2019/1009 of the European Parliament (Organic Solid Fertilizer)

The test is marked as successful if the NPK values are greater than or equal to 1%, else, it will be marked as unsuccessful
